

Energy Technologies Area

Lawrence Berkeley National Laboratory

Consistency and Coordination of Energy Efficiency EM&V and Reporting

January 31, 2017

**EM&V Webinars Facilitated By:
Lawrence Berkeley National Laboratory
<https://emp.lbl.gov/emv-webinar-series>**

**With Funding From:
U.S. Department of Energy's Office of Electricity Delivery and Energy Reliability-
Electricity Policy Technical Assistance Program**

**In Collaboration With:
U.S. Environmental Protection Agency**

**National Association of Regulatory Utility Commissioners
National Association of State Energy Officials**

Introduction

- ◆ LBNL is supported by the U.S. Department of Energy to conduct non-classified research, operated by the University of California
- ◆ Provides technical assistance to states—primarily state energy offices and utility regulatory commissions

The presentation was funded by the U.S. Department of Energy's Office of Electricity Delivery and Energy Reliability-National Electricity Delivery Division under Lawrence Berkeley National Laboratory Contract No. DE-AC02-05CH11231.

Disclaimer

This presentation was prepared as an account of work sponsored by the United States Government. While this presentation is believed to contain correct information, neither the United States Government nor any agency thereof, nor The Regents of the University of California, nor any of their employees, makes any warranty, express or implied, or assumes any legal responsibility for the accuracy, completeness, or usefulness of any information, apparatus, product, or process disclosed, or represents that its use would not infringe privately owned rights. Reference herein to any specific commercial product, process, or service by its trade name, trademark, manufacturer, or otherwise, does not necessarily constitute or imply its endorsement, recommendation, or favoring by the United States Government or any agency thereof, or The Regents of the University of California. **The views and opinions of authors expressed herein do not necessarily state or reflect those of the United States Government or any agency thereof, or The Regents of the University of California. Ernest Orlando Lawrence Berkeley National Laboratory is an equal opportunity employer.**

Technical Assistance

- ◆ LBNL provides technical assistance to state utility regulatory commissions, state energy offices, tribes and regional entities in these areas:
 - ❑ Energy efficiency (e.g., EM&V, utility programs, behavior-based approaches, cost-effectiveness, program rules, planning, cost recovery, financing)
 - ❑ Renewable energy resources
 - ❑ Smart grid and grid modernization
 - ❑ Utility regulation and business models (e.g., financial impacts)
 - ❑ Transmission and reliability
 - ❑ Resource planning
 - ❑ Fossil fuel generation
- ◆ Assistance is independent and unbiased
- ◆ LBNL Tech Assistance website: <https://emp.lbl.gov/projects/technical-assistance-states>
- ◆ US DOE Tech Assistance gateway: <http://energy.gov/ta/state-local-and-tribal-technical-assistance-gateway>

Webinar Series

- ◆ Webinars designed to support EM&V activities for documenting energy savings and other impacts of energy efficiency programs
- ◆ Funded by U.S. DOE in coordination with EPA, NARUC and NASEO
- ◆ Outreach partners include: ACEEE, IEPEC and Regional Energy Efficiency Organizations such as NEEP, MEEA and SEEA
- ◆ Audience:
 - ❑ Utility commissions, state energy offices, state environment departments, and non-profits involved in operating EE portfolios
 - ❑ Particular value for state officials starting or expanding their EM&V
 - ❑ Evaluation consultants, utilities, consumer organizations and other stakeholders also are welcome to participate
- ◆ For more information (upcoming and recorded webinars, EM&V resources) see:
 - ❑ <https://emp.lbl.gov/emv-webinar-series>
 - ❑ General Contact: EMVwebinars@lbl.gov

Series Contact:

Steve Schiller
Senior Advisor, LBNL
SRSchiller@lbl.gov

Next Webinar

- ◆ More webinars coming for 2017 and beyond...

Today's Webinar – Coordination/Consistency

- ◆ EM&V processes and reporting practices vary among utilities and other efficiency program administrators and states
- ◆ Consistency, rigor and completeness concerns have been identified
- ◆ There are opportunities via increasing coordination on EM&V and consistency of reporting for:
 - ▣ Improving the quality of EM&V
 - ▣ Facilitating benchmarking, disclosure, tracking and reporting of energy efficiency impacts
 - ▣ Reducing EM&V development and implementation costs

Today's Agenda

- ◆ *Western states EM&V coordination project with reporting tool examples* – Steve Schiller, Berkeley Lab
- ◆ *DOE's Uniform Methods Project* - Michael Li, U.S. Department of Energy
- ◆ *National Energy Efficiency Registry* - Molly Cripps, Tennessee Office of Energy Programs, and Rodney Sobin, NASEO
- ◆ *M&V for industrial efficiency* - Peter Therkelsen, Berkeley Lab
- ◆ *LBNL database and tracking efforts for ESCO projects* - Liz Stuart, Berkeley Lab
- ◆ Q&A with panelists

Energy Technologies Area

Lawrence Berkeley National Laboratory

Western EM&V Coordination Options Project

Technical Assistance by:
Electricity Markets and Policy Group
Lawrence Berkeley National Laboratory
(LBNL)

For:
Western Interstate Energy Board (WIEB)

Funded By:
U.S. Department of Energy

Presentation by Steve Schiller, LBNL

Background

- ◆ In 2015, WIEB requested technical assistance on exploring potential multi-state coordination on DSM EM&V.
- ◆ LBNL prepared a brief titled *“Coordinating Demand-Side Efficiency Evaluation, Measurement and Verification Among Western States: Options for Documenting Energy and Non-Energy Impacts for the Power Sector.”* The brief can be found at: https://emp.lbl.gov/sites/all/files/lbnl-1005776_0.pdf.
- ◆ The brief covered three potential approaches and several possible products for EM&V coordination among state and regional agencies addressing:
 - ❑ *Energy efficiency, demand response and other distributed resources, and*
 - ❑ *Pollution prevention.*
- ◆ Subsequently, there is interest in developing a Western States EM&V Clearinghouse – now being explored by WIEB and LBNL with input from Western states and regional organizations.

What is EM&V Coordination?

- ◆ Fundamentally, EM&V coordination for *energy efficiency and demand response* programs and measures consists of *effective interactions* among public agencies and other organizations *concerning the documentation of the potential and actual impacts* of these activities.
- ◆ Coordination can also include *distributed generation and storage*.
- ◆ Public agencies that might be involved in such coordination are:
 - ❑ State PUCs, energy offices and air regulators
 - ❑ Local agencies such as city and regional governments with their own efficiency initiatives and community development offices
 - ❑ Regional organizations (e.g., independent system operators, Northwest Power & Conservation Council Regional Technical Forum)

National Examples

◆ The State and Local Energy Efficiency Action Network (SEE Action) -

<https://www4.eere.energy.gov/seeaction/>

- ❑ Offers resources, discussion forums, and technical assistance to state and local entities
- ❑ Facilitated by US DOE and US EPA
- ❑ Has an EM&V Working Group

U.S. DOE's Uniform Methods Project - <http://energy.gov/eere/about-us/about-ump>

- ❑ Developing M&V protocols for determining energy savings for commonly implemented program measures.
- ❑ Collaborating with energy efficiency program administrators, and stakeholders
- ❑ Has national technical and steering committees

NEER - <https://www.theclimateregistry.org/thoughtleadership/energy-efficiency/>

- ❑ Six U.S. states, The Climate Registry and NASEO secured a DOE award to develop a national energy efficiency registry (NEER).
- ❑ Registry would be intended to allow states to track their own initiatives as well as demonstrate progress towards energy goals

Why EM&V Coordination?

- ◆ EM&V coordination among (Western) states' public agencies could:
 - ❑ Facilitate and improve the quality of EM&V
 - ❑ Facilitate interstate (and intrastate) benchmarking, disclosure, and tracking of demand side projects and their energy savings by improving the consistency and quality of EM&V procedures
 - ❑ Support trading of energy efficiency and DER savings credits if used for pollution reduction programs or regulations
 - ❑ Reduce EM&V development and implementation costs, thus reducing the cost of DSM program implementation and encouraging more energy savings
- ◆ However there can be some challenges to coordination:
 - ❑ Potential for some loss of local or state control
 - ❑ “Lowest common denominator” - products or services that do not meet the needs of some of the participating entities
 - ❑ Increased costs and delays through coordination inefficiencies or failures

Identified Coordination Options

- ◆ **Information clearinghouse/exchange** – a relatively low level of coordination involving sharing of existing EM&V documents, procedural approaches and exchanging information and experience
- ◆ **EM&V product development** – mutual (voluntary) development of specific EM&V products that support consistent, cost-effective EM&V implementation
- ◆ **Regional EE and DR tracking system platform** – development and implementation by interested states of a regional entity that administers registry rules and reporting infrastructure. The tracking system could support:
 - ▣ Compliance with state, regional or federal pollution prevention programs
 - ▣ Disclosure and benchmarking of regional, state and/or local EE and DR efforts

Clearinghouse Option Being Pursued

- ◆ Based on feedback and comments from Western States

Fall 2016 Webinar on coordination and clearinghouse:

<http://westernenergyboard.org/wieb-board/projects/idaho-wieb-state-energy-planning/meetings-and-webinars/>

- ◆ Benefits as mentioned in prior slides. However, the prior mentioned challenges are not significant at this level of coordination.
- ◆ Clearinghouse can be springboard to higher levels of coordination

EM&V Clearinghouse: Options for Moving Forward

Information that could be shared:

- ◆ EM&V methodologies and deemed savings values/calculations
- ◆ State evaluation framework documents and protocols
- ◆ Technical papers describing EM&V issues and techniques
- ◆ Examples of requests for proposals used to solicit independent evaluators
- ◆ Links to regulatory filings and orders on energy efficiency EM&V
- ◆ Contact information for people conducting EM&V activities
- ◆ Glossary of EM&V terms
- ◆ Case studies and lessons learned from EM&V activities

Possible Formats

- ◆ Web site with public and password-protected information
- ◆ Regular webinars, workshops or conferences
- ◆ Informal information-sharing and networking among those involved in EM&V via listservs, “Meet-ups,” conference calls, etc.
- ◆ Technical assistance network that shares experts available to support agencies

For more information on Western EM&V Coordination

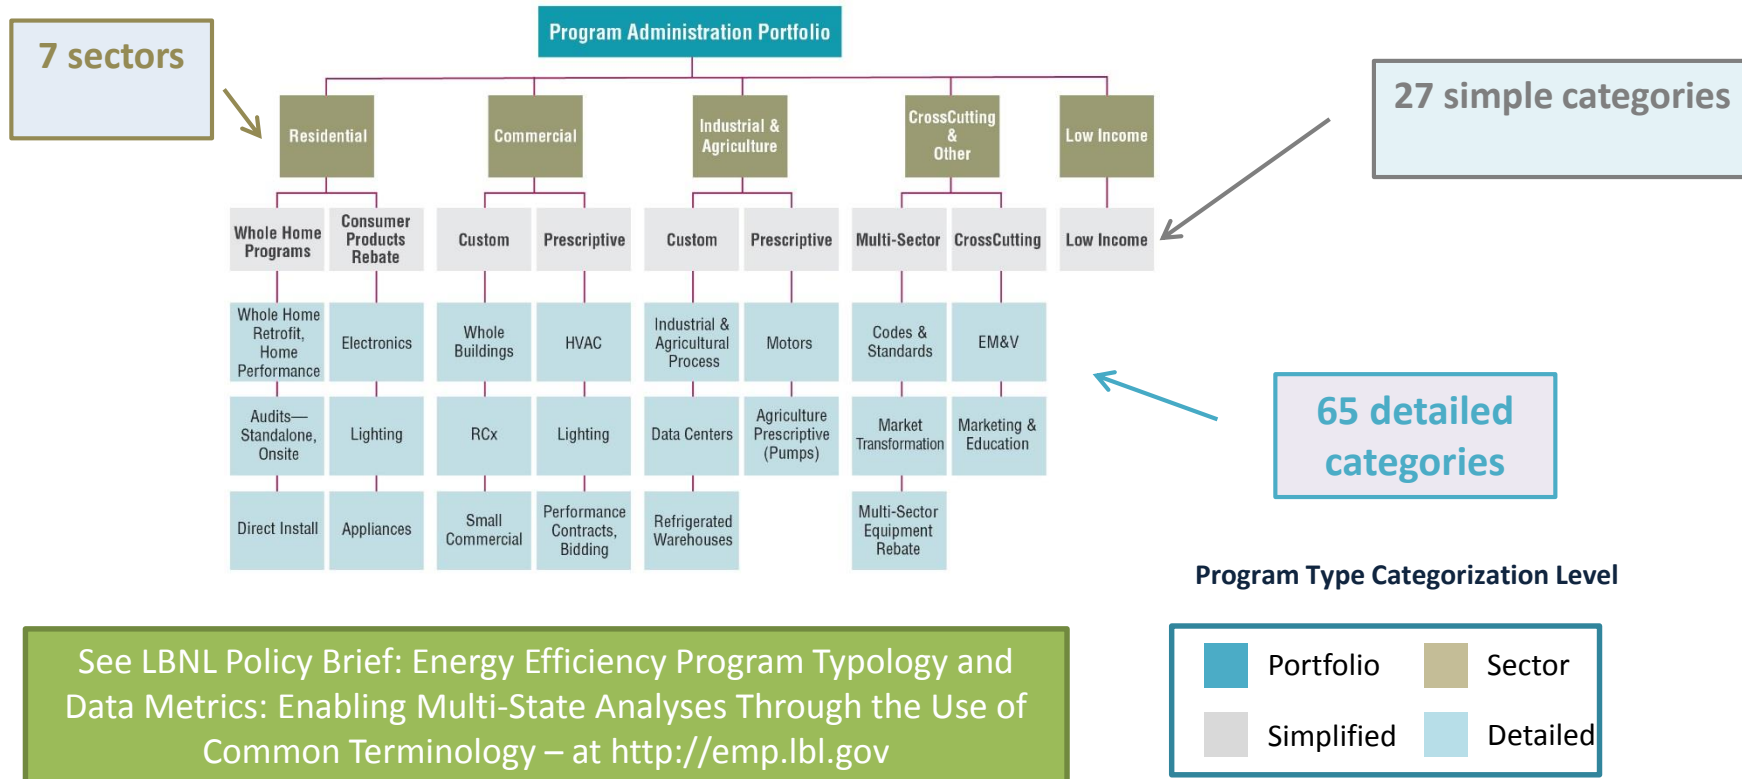

- ◆ Fall 2016 Webinar on coordination and clearinghouse:
<http://westernenergyboard.org/wieb-board/projects/idaho-wieb-state-energy-planning/meetings-and-webinars/>
- ◆ LBNL brief titled “Coordinating Demand-Side Efficiency Evaluation, Measurement and Verification Among Western States: Options for Documenting Energy and Non-Energy Impacts for the Power Sector.” https://emp.lbl.gov/sites/all/files/lbnl-1005776_0.pdf
- ◆ Contact:
 - ❑ Alaine Ginocchio, Attorney/Policy Analyst, Western Interstate Energy Board, aginocchio@westernenergyboard.org
 - ❑ Steve Schiller, Senior Advisor/Affiliate, Berkeley Lab, srschiller@lbl.gov
 - ❑ Lisa Schwartz, Deputy Group leader, Electricity Markets and Policy Group, LCSchwartz@lbl.gov

Example Opportunity for Increasing Consistency: Energy Efficiency Program Reporting

- ◆ Administrators of utility customer-funded energy efficiency programs regularly report what they spend and save to their regulators or other oversight entities
- ◆ These reports typically include:
 - ▣ Narrative that highlights achievements of the program administrator's portfolio of efficiency programs
 - ▣ Tables and charts that quantify spending, savings, and achievement of policy objectives
- ◆ Issues:
 - ▣ Energy efficiency reporting practices vary widely among program administrators and states.
 - ▣ Many studies of reporting practices for efficiency programs have identified issues of consistency, rigor and completeness
 - ▣ Challenging to determine whether a program administrator is achieving its energy efficiency goals

Issue in EE Reporting – Standardized Program Typology

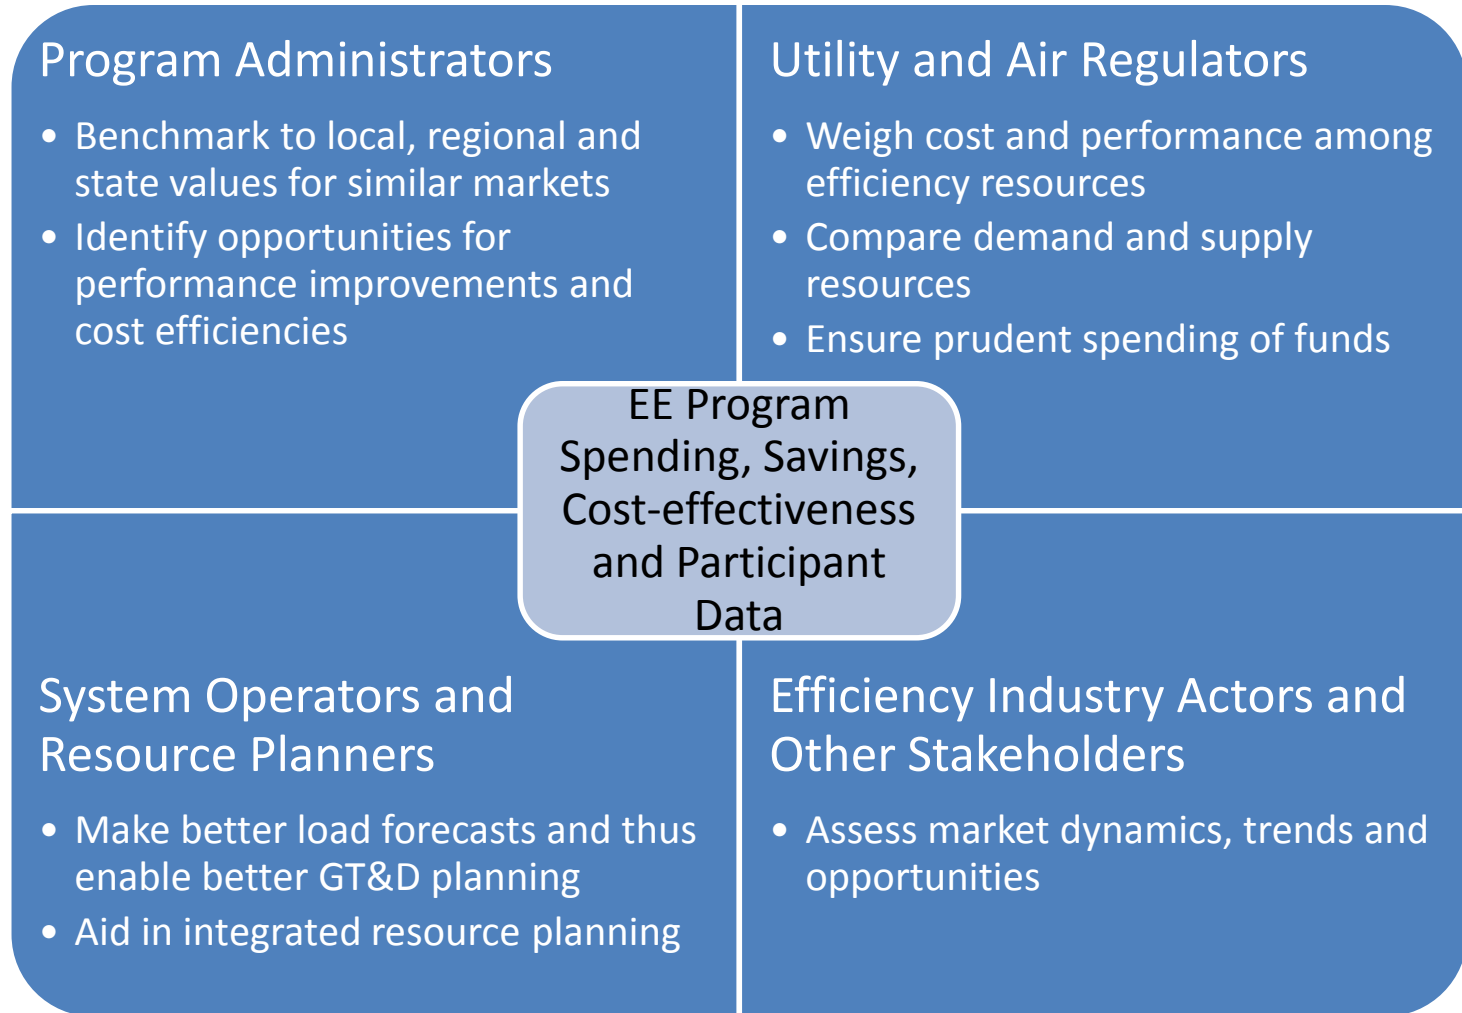

- ◆ Weak consensus on EE terminology and no fully adopted standard scheme for characterizing EE programs

EE Reporting Project Objectives

- ◆ Encourage more transparency, consistency and rigor in reporting EE program impacts, costs and methodologies
 - ❑ Particularly in those states where program administrators do not currently provide annual reports
 - ❑ Elevate the quality of reporting by states that are new to EE or just ramping up
 - ❑ Greater consistency: classification of spending and resource costs (administrative costs, incentives) and estimation of program impacts (e.g., net savings)
- ◆ Encourage comprehensiveness
 - ❑ More program-level reporting by states and program administrators on total costs, cost effectiveness, customer participation, market penetration

Uses of Reported Energy Efficiency Data

LBNL Energy Efficiency Reporting Tools

For Mid-Sized/Early Stage Private Utilities Or Other Similar Program Administrators

- Full-featured DSM reporting tool for program administrators (PA) funded by utility customers
 - Flexible to accommodate the diverse data requirements in states while maintaining consistency
- Program-level data on spending, savings, participation, cost effectiveness and program design
- Screening questions allow PA or PUC to customize information that is to be reported
- Includes data glossary and program typology

insert program administrator logo here

ABC Utility

Standardized Annual Reporting Workbook v1.0 September 2015

STEP ONE: Complete Program Administrator (PA) Information

Instructions **Data Glossary**

Program Administrator Name: ABC Utility

Program year being reported: 2014

Program year definition:

EE proceeding docket #:

Date EE docket was filed:

Name of Contact:

Email Address:

Telephone Number:

Single or Multi Fuel Utility: Single Fuel

Utility Fuel Type Reported: Electric

2014 EE Savings Target Format: Gross Energy Savings

2014 EE Gross Savings Target (MWh): 200

Target baseline retail sales (MWh): 26,800

Source of target baseline retail sales:

Portfolio, Reporting & Other Notes

[Click to Add Notes](#)

STEP TWO: Answer screening questions

Answer these questions to help establish your minimum reporting requirements and desired outputs

1) How do you report your savings?

☒ Net & Gross

☐ Gross Only

1b) Do your reported gross savings values account for naturally occurring energy savings?

☐ Yes

☒ No

2) What level are your programs screened for cost-effectiveness for regulatory purposes?

☐ Customer sector & Portfolio

☒ Program

3) What cost effectiveness tests do you provide in your annual report? Select all that apply

☒ Total Resource Cost Test

☒ Program Administrator Cost Test

☐ Societal Cost Test

☐ Ratepayer Impact Measure Test

4) Do you want to compare actual expenditures and claimed savings with planned values?

☐ Yes

☒ No

5) Are you also reporting evaluated savings?

☐ Yes

☒ No

6) Are you comparing spending and savings for this program year with previous program years?

☐ Yes

☒ No

7) Do you report savings at site or savings at the site plus T&D losses between site and the power plant?

☐ Site

☒ Site plus T&D losses

8) Do you account for interactive effects in your reported savings values? (see glossary for definition)

☒ Yes

☐ No

9) Do you have an energy efficiency program that allows customers to finance projects?

☐ Yes

☒ No

10) Do you report a claimed program administrator incentive?

☐ Yes

☒ No

STEP THREE: Data Inputs

Common to all Program Administrators

a) Program Details & Descriptions

b) Claimed Program Savings

c) Actual Program Expenditures

d) Cost-effectiveness Test Results

e) Key Assumptions

Reporting features specific to ABC Utility

Available features depend on answers in Step Two

STEP FOUR: Data Outputs

Table 1: Portfolio Savings, Expenditures, Cost Effectiveness, Goals & Assumptions

Table 2: Market Sector Savings, Expenditures and Cost Effectiveness

Table 3: Spending by Program

Table 4: Portfolio Summary by Expenditure Type

Table 5: Results Detailed by Program

FOR SMALL/EARLY STAGE PUBLIC POWER PROGRAM ADMINISTRATORS

- [illegible]

For More Information on Reporting Tools

- ◆ See LBNL website for 'cost of saved energy' with information on the reporting tools:
 - ◆ Available at no cost for download with supporting reports and documents
 - ◆ <https://emp.lbl.gov/what-it-costs-save-energy>
- ◆ Contact:
 - Ian M. Hoffman

Now - Our Other Topics and Speakers

- ◆ *DOE's Uniform Methods Project –*
 - Michael Li, U.S. Department of Energy

- ◆ *National Energy Efficiency Registry –*
 - Molly Cripps, Tennessee Office of Energy Programs
 - Rodney Sobin, NASEO

- ◆ *M&V for industrial efficiency –*
 - Peter Therkelsen, Berkeley Lab

- ◆ *LBNL database and tracking efforts for ESCO projects and utility programs –*
 - Liz Stuart, Berkeley Lab

Uniform Methods Project

U.S. DEPARTMENT OF
ENERGY

Michael Li, Office of Energy Efficiency and Renewable Energy

- **The goal is to strengthen the credibility of energy efficiency programs by improving the consistency and transparency of how energy savings are determined.**
- **UMP is a set of protocols for determining savings from energy efficiency measures and programs.**
- **UMP documents the generally accepted best practice method for determining savings for each protocol.**

- **More detailed approach based on IPMVP in most cases**
- **Protocols for individual measures focus on gross savings primarily**
- **Application is for EE programs, not projects.**
- **For project M&V, DOE has developed the FEMP M&V Guidelines used primarily for ESPC projects**

- A description of measure and application conditions
- An algorithm for estimating savings
- An example of a typical program offering and alternative delivery strategies
- Considerations for the measurement and verification process, including an International Performance Verification and Measurement Protocol (IPMVP) option
- Data requirements for verification and recommended data collection methods
- Recommended program evaluation elements

- **Commercial and Industrial Lighting Evaluation Protocol (April 2013)**
- **Commercial and Industrial Lighting Controls Evaluation Protocol (April 2013)**
- **Chiller Evaluation Protocol (September 2014)**
- **Commercial New Construction Protocol (September 2014)**
- **Retrocommissioning Evaluation Protocol (September 2014)**
- **Variable Frequency Drive Evaluation Protocol (September 2014)**
- **HVAC Controls (DDC/EMS/BAS) Evaluation Protocol (September 2014)**
- **Data Center IT Efficiency Measures (January 2015)**
- **Compressed Air Evaluation Protocol (November 2014)**
- **Combined Heat and Power Evaluation Protocol (November 2016)**

- **Residential Furnaces and Boilers Evaluation Protocol (April 2013)**
- **Residential Lighting Evaluation Protocol (December 2014)**
- **Residential Behavior Protocol (January 2015)**
- **Refrigerator Recycling Evaluation Protocol (April 2013)**
- **Small Commercial and Residential Unitary and Split System HVAC Cooling Equipment-Efficiency Upgrade Evaluation Protocol (April 2013)**
- **Whole-Building Retrofit with Consumption Data Analysis Evaluation Protocol (April 2013)**

- **Metering Cross-Cutting Protocols (April 2013)**
- **Peak Demand and Time-Differentiated Energy Savings Cross-Cutting Protocols (April 2013)**
- **Sample Design Cross-Cutting Protocols (April 2013)**
- **Survey Design and Implementation Cross-Cutting Protocols for Estimating Gross Savings (April 2013)**
- **Assessing Persistence and Other Evaluation Issues Cross-Cutting Protocols (April 2013)**
- **Estimating Net Savings: Common Practices (September 2014)**

Each chapter has been written by technical experts in collaboration with their peers, reviewed by industry experts, and subject to public review and comment.

Protocols are updated as necessary. Major and minor revisions to most of the protocols will occur in 2017.

The Climate Registry

NEER

NATIONAL ENERGY
EFFICIENCY REGISTRY

Molly Cripps
Rodney Sobin

About the NEER

- A central repository that will allow the public and private sectors to transparently track attributes associated with energy efficiency initiatives
- Policy neutral
- Built on best practice
 - Registry design
 - EE accounting and reporting protocols
- Will help states demonstrate progress towards energy goals and potential compliance with existing and future regulation
- Will be able to track energy conservation and other types of reduction efforts

→ NEER will be a software platform

A close-up photograph of a computer keyboard. The focus is on three specific keys: a purple key labeled 'Trade', a green key labeled 'Buy', and an orange key labeled 'Sell'. Other keys like 'G', 'Y', 'B', and 'N' are partially visible around them.

```
graph TD; A[Patron submits request] --> B{Recommended for purchase?}; B -- No --> C[ILL attempts to borrow]; B -- Yes --> D{Meets other criteria?}; D -- No --> C; D -- Yes --> E[Acquisitions orders & attaches OCLC symbol]; C --> F{Is it better to buy than borrow?}; F -- Yes --> E; F -- No --> G[Item received & patron notified]; E --> H[Item received & processed]; H --> I[Hold placed & patron notified];
```

The flowchart illustrates the process for handling a patron's request for a book. It begins with a blue rectangular box labeled "Patron submits request". An arrow points to a green diamond decision box labeled "Recommended for purchase?". From this diamond, a "No" path leads to a blue rectangular box labeled "ILL attempts to borrow", while a "Yes" path leads to another green diamond decision box labeled "Meets other criteria?". From the "Meets other criteria?" diamond, a "No" path also leads to the "ILL attempts to borrow" box, and a "Yes" path leads to a blue rectangular box labeled "Acquisitions orders & attaches OCLC symbol". From the "ILL attempts to borrow" box, an arrow points to a green diamond decision box labeled "Is it better to buy than borrow?". From this diamond, a "Yes" path leads to the "Acquisitions orders & attaches OCLC symbol" box, and a "No" path leads to a red rectangular box labeled "Item received & patron notified". From the "Acquisitions orders & attaches OCLC symbol" box, an arrow points to a blue rectangular box labeled "Item received & processed", which then leads to a final red rectangular box labeled "Hold placed & patron notified".

[illegible]

Compliance Reporting

The Climate Registry

Potential NEER Applications

Electric EE

Rate-payer programs

Private EE

Emission Reductions

Tracking for State EE Programs

Supports multi-state EE collaboration

Compliance: other Environmental or Energy Policies

Performance-based EE procurement

Fossil Fuel EE

Non-electric carbon regulation

NEER Objectives

- Provide a consistent framework that better recognizes EE contributions for achieving energy and environmental objectives
- Document verification of EE projects according to the appropriate eligibility standards
- Facilitate the opportunity for EE instrument trading

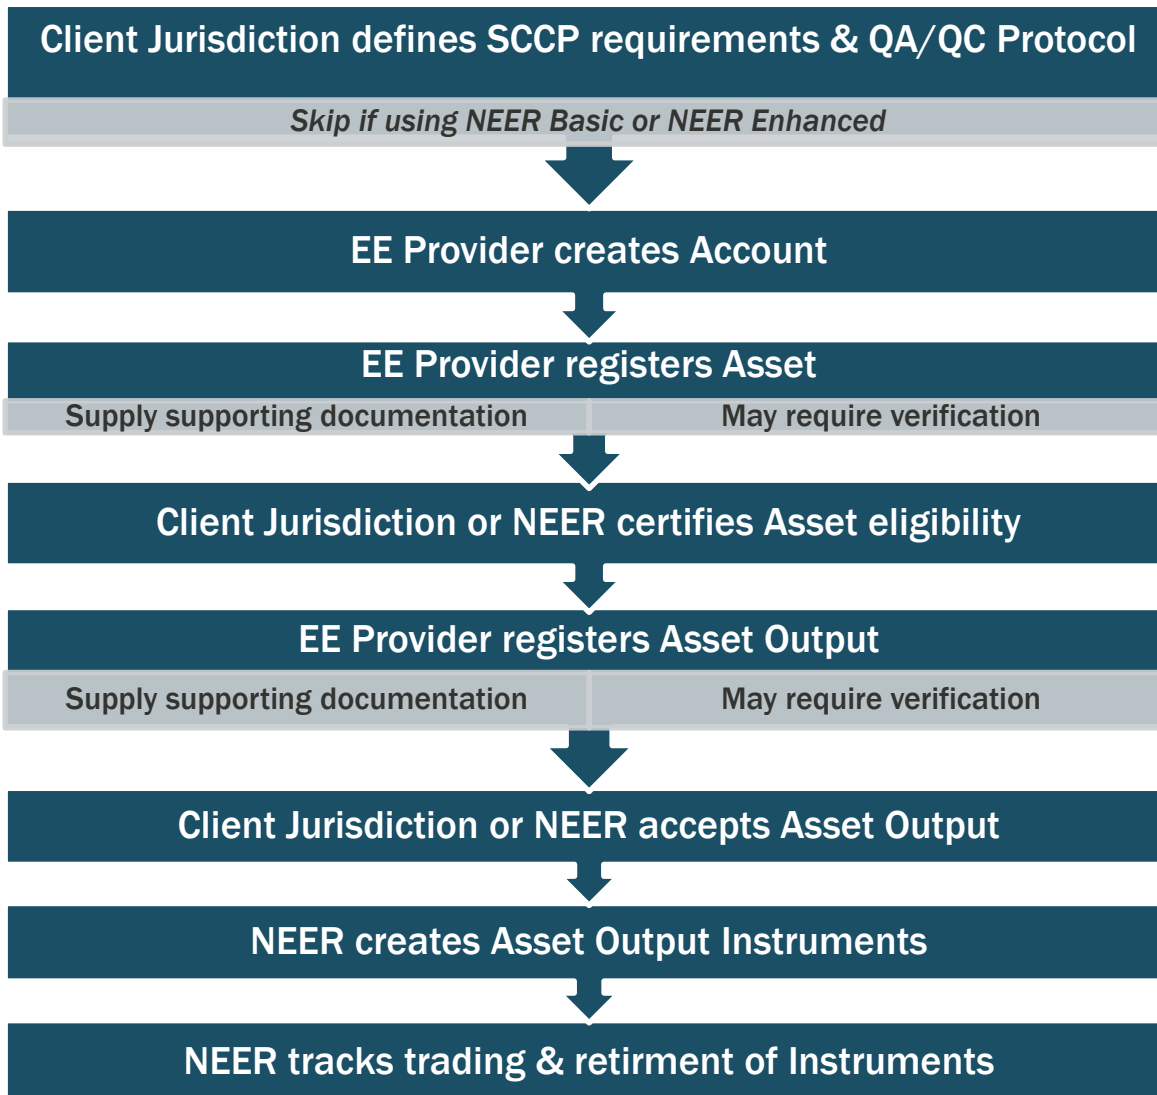

Improve transparency and credibility of EE as (often) the lowest cost energy resource.

The Climate Registry

IMPROVING EM&V DISCLOSURE

NEER Steps:

Certifies work

Tax Payer
completes and
submits forms

IRS
Make
determination

NEER Support of State Efforts

- Can lower EE program, policy administrative costs by:
 - Streamlined, consistent, (sometimes) automated processes
- Streamline energy efficiency project EM&V
- Support state energy and environmental planning efforts
- Avoid double counting of energy savings
- Create greater transparency of energy efficiency programs and impacts

NEER Support of State Efforts

- *NEER can improve the credibility and transparency of energy savings and associated benefits.*
- *This would increase recognition of EE as cost-effective and efficacious for helping meet state energy and environmental goals.*
- *This can incite more investment in EE.*

The Climate Registry

WHERE WE ARE NOW

Equipment
Systems
Processes

Energy management systems (EnMS) based strategic energy management (SEM) programs drive operational and technology energy savings in industry

Energy Management System (EnMS)

- **Business practice** to actively manage **and continually improve** energy performance facility wide
 - Sector agnostic but most common in industry
- **ISO 50001** - International EnMS standard
 - Requirements** for best practice EnMS

Growing number of utility and other programs aimed at improving energy performance facility wide

- Utility based program commonly referred to as “Strategic Energy Management” (**SEM**) programs
 - BPA, Energy Trust of Oregon, BC Hydro, Wisconsin FOE, Eversource...**

SEM programs determine facility wide energy savings as the difference in baseline and reporting period energy consumption

Relevant variables affect energy consumption levels

- Production
- Weather

Baseline
Period

Reporting

Performance® (SEP™)

Measurement & Verification Protocol

Standards provide harmonization to the approach for EnMS (SEM) type M&V

International Standards for EnMS M&V

- ISO 50015 – 2014 standard on the process of conducting EnMS M&V
- ISO 50047 – 2016 standard on calculating facility-wide energy savings

US SEM M&V Harmonization

- US DOE Uniform Methods Project – SEM Evaluation Protocol
- US DOE Qualified Energy Savings Protocol – 2017 standard based upon ISO M&V and energy savings standards and experience from other US DOE EnMS programs (Superior Energy Performance)

Based upon ISO standards - key principles of facility-wide M&V

1. **Facility boundaries**
2. **Time periods**
3. **Energy accounting**
 1. **Energy consumption data**
 2. **Relevant variables**
4. **Normalization for relevant variables – adjustment modeling**
 1. **Methods of normalization**
 2. **Development of energy consumption adjustment models**
 3. **Adjustment model validity requirements**
 1. Quantitative requirements
 2. Qualitative requirements
5. **Calculation of energy savings**
 1. **Common energy performance indicators**
 1. Reporting period energy consumption / baseline period energy consumption
6. **Bottom-up comparison**
 1. **Register of implemented energy performance improvement actions (registrar)**
 2. **Netting out other incentivized projects**
 3. **Conducting the bottom-up comparison**
7. **Reporting energy performance improvement**

“50001 Ready” - a self directed US DOE SEM program designed to be adapted by utilities

US DOE is in beta test of a new self directed ISO 50001 EnMS based SEM program

- **“50001 Navigator” self direct tool for implementing an EnMS**
 - “Turbo Tax” for EnMS implementation**
- **M&V support**
 - Qualified Energy Savings protocol**
 - Qualified Energy Savings Tool (QUEST)**
 - **Online facility boundaries based regression model energy savings calculator**
- **Utility engagement**
 - Developing reference program designs and supporting materials for utilities to adapt 50001 Ready tools and program as appropriate.**

LBNL Database and Tracking Efforts for ESCO Projects

LBNL ESCO Database and eProject Builder

LBNL Electricity Markets and Policy Group
For U.S. DOE: FEMP and OWIP

A screenshot of the eProjectBuilder website. The page has a dark blue header with links for "Benchmarking", "Help/Documentation", and "About". The main content area is white and features the eProjectBuilder logo, which consists of a stylized building icon and the text "eProjectBuilder". Below the logo, a brief description states: "ePB enables energy service companies (ESCOs) and their customers to securely:". A list of four bullet points follows: "1. Upload, track and access ESPC project-level information for the life of the performance contract", "2. Quickly generate data for project and portfolio reports", "3. Develop project scenarios using standardized amortization calculations", and "4. Benchmark new ESPC projects against historical project data". At the bottom left of the main content area is a "Learn more" button. On the right side of the page is a "Step 1: Please sign in" form. The form includes fields for "Email:" and "Password:", a "Forgot password?" link, a "Sign in" button, and a link for "New to ePB? Request an Account".

Presentation by Elizabeth Stuart, LBNL

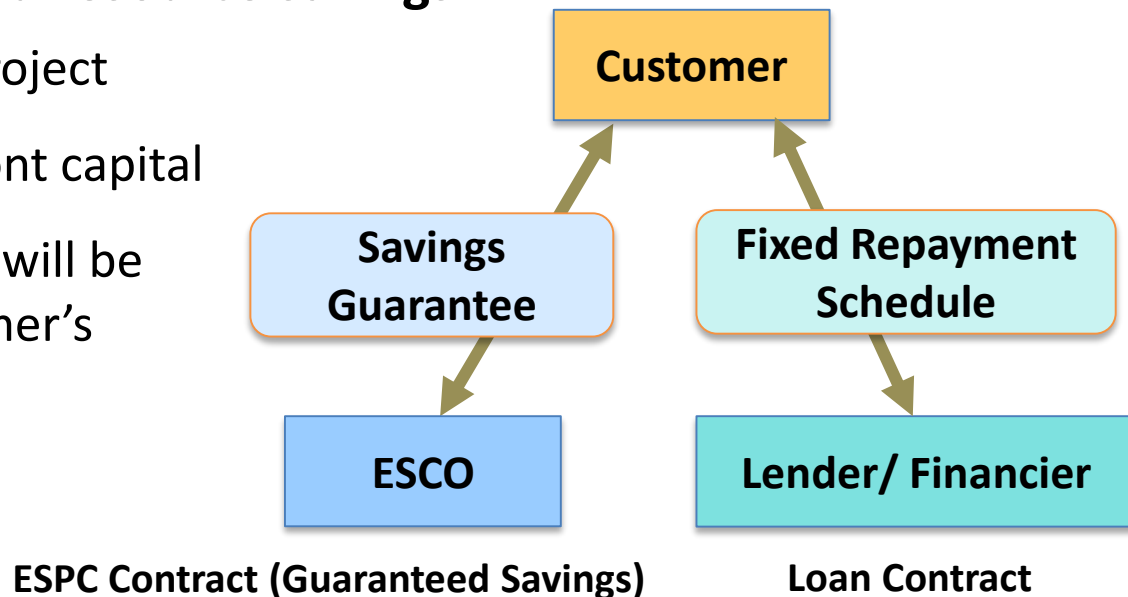

Background: ESCO Business Model

◆ Energy Service Companies (ESCOs) in the business of improving end-use energy efficiency:

- ❑ Provide range of energy efficiency, engineering and construction services
- ❑ ESCO definition: company that provides energy savings performance contracting (ESPC) as core business offering

◆ ESPC provides guaranteed resource savings

- ❑ Customer finances the project
- ❑ Enables EE w/little up-front capital
- ❑ ESCO guarantees savings will be sufficient to cover customer's annual debt obligation

M&V Key for ESPC

- ◆ **Annual measurement & verification (M&V) is necessary for verifying ESPC savings & determining whether project is performing per contractual guarantee**
- ◆ **Several leading best practices for M&V have been established and continue to evolve:**
 - ❑ International Performance Measurement & Verification Protocol (IPMVP)
 - ❑ ASHRAE Guideline 14
 - ❑ DOE Uniform Methods Project
 - ❑ FEMP M&V Guidance

M&V Best Practice Guidelines

◆ IPMVP – Efficiency Valuation Organization (EVO)

- ❑ Established in 1995; has undergone several revisions
- ❑ Conceptual framework for measuring, calculating and reporting
- ❑ Defines key terms and highlights issues to consider in M&V plans
- ❑ Four M&V Options: A, B, C, D

◆ ASHRAE Guideline 14

- ❑ Three approaches closely related to/in support of IPMVP Options B, C and D

◆ DOE Uniform Methods Project (UMP)

- ❑ Protocols for evaluating gross savings for ratepayer-funded residential & C/I EE

◆ FEMP M&V Guidance 4.0

- ❑ Specifies procedures for applying concepts originating in IPMVP
- ❑ Applies to ESPC and UESC (Utility Energy Service Contracts)
- ❑ Used by federal, state and local governments

LBNL ESCO Database Project

◆ Overview

- ❑ 15+ year NAESCO/LBNL partnership with voluntary participation from ESCO industry and government agencies
- ❑ Repository of project-level cost and verified savings data
- ❑ Largest such dataset in the world: ~5600 projects from 1990 to 2016

◆ Project Objectives

- ❑ Track ESCO industry market and project performance trends
- ❑ Objective information resource on performance contracting and private-sector ESCOs

eProject Builder ESCO Project Database

◆ eProject Builder (ePB) Overview

- ❑ Secure, web-based ESPC data entry and tracking system
- ❑ Funded by U.S. DOE: FEMP and OWIP
- ❑ Launched in late 2014

◆ Project Objectives

- ❑ Standardize data collected & reported across ESCOs and markets
- ❑ Platform for tracking project and M&V for life of the project
- ❑ Enable robust data-based analysis and benchmarking
- ❑ Data preservation/access to agencies and ESCOs for reporting
- ❑ Increase transparency and reduce ESPC transaction costs

eProject Builder ESCO Project Database

[Benchmarking](#)[Help/Documentation](#)[About](#)

ePB enables energy service companies (ESCOs) and their customers to securely:

1. Upload, track and access ESPC project-level information for the life of the performance contract
2. Quickly generate data for project and portfolio reports
3. Develop project scenarios using standardized amortization calculations
4. Benchmark new ESPC projects against historical project data

eProject Builder ESCO Project Database

◆ Uptake/Participation

- ❑ Contains ~460 projects representing implementation costs of \$3.8B and cumulative guaranteed savings of \$9.4B
- ❑ Incl. federal state/local, university/college, K-12, and public housing sector

◆ Multiple Uses

- ❑ DOE FEMP requiring ePB use for ESPC; will use for DOE Qualified ESCO list submission platform
- ❑ NAESCO to use ePB as accreditation submission platform

◆ Enabling Standardized ESPC M&V Tracking

- ❑ 3-State Team (GA, KY, GA) evaluated ePB for improving M&V practices; found ePB suitable for agencies tracking multiple ESPC projects
- ❑ Being considered as ESPC savings repository for National Energy Efficiency Registry (NEER)

From Albert Einstein:

"Everything should be as simple as it is, but not simpler"

"Everything that can be counted does not necessarily count; everything that counts cannot necessarily be counted"

Art Rosenfeld (1926-2017)

Art Rosenfeld was a Berkeley Lab Distinguished Scientist Emeritus and recipient of three Presidential awards – known as California’s “godfather” of energy efficiency.

Art passed away at his home in Berkeley on Friday.
